Vitellogenin - Endocrine Disrupters

Vitellogenin is the precursor of yolk proteins in fish and synthesized under the influence of estrogens. Determination of Vitellogenin is of importance in evaluating the effects of estrogen and anti-estrogen disruptors as well as in a variety of physiological studies. The patented TECO Mucus Collection allows the non-invasive, repeated sampling of epidermal mucus for Vitellogenin determination and offers new opportunities in monitoring programs and to study the dynamic of endocrine disruptors within the same fish over time. All TECO Vitellogenin ELISAs are suitable for the use in blood, homogenate and mucus samples.

The TECO Vitellogenin ELISA System is based on 9 different Vitellogenin ELISA tests covering more than 37 fish species, including standard and ultra sensitive Vitellogenin ELISA tests as well as specific REACH kit configurations designed to fulfill the specific requirements for endocrine disruptor testing according to REACH and OECD guidelines.

Vitellogenin - Mucus Sample Type

Vitellogenin Cyprinid TECO		ELISA	96	TE1037
Vitellogenin Cyprinid TECO REACH		ELISA	96	TE1040
Vitellogenin Cyprinid TECO Ultra-Sensitive		ELISA	96	TE1046
Vitellogenin Medaka TECO REACH		ELISA	96	TE1043
Vitellogenin Mucus Sampling Set		ELISA	42	TE1034
Vitellogenin Multi Species TECO		ELISA	96	TE1042
Vitellogenin Perch (Perciformes) TECO		ELISA	96	TE1035
Vitellogenin Perch (Perciformes) TECO REACH		ELISA	96	TE1039
Vitellogenin Salmonid TECO		ELISA	96	TE1047
Vitellogenin Salmonid TECO Ultra-Sensitive		ELISA	96	TE1049
